## Abstract

In this contribution, Italian new data concerning the distribution of the Annex I Habitats 3150, 3170\*, 3260, 4090, 91L0, 91M0, 9340 are reported. In detail, 20 new occurrences in Natura 2000 sites are presented and 30 new cells are added in the EEA 10 km × 10 km reference grid. The new data refer to the Italian administrative regions of Campania, Lazio, Sardinia, Sicily, Tuscany, and Umbria.

## Keywords

3150, 3170\*, 3260, 4090, 91L0, 91M0, 9340, conservation, vegetation, 92/43/EEC Directive

## Introduction

This is the seventh standardized contribution reporting records of new occurrences of Annex I Habitats in Europe. Based on the results of the 4th Report ex-Art. 17 of Annex I Habitat Monitoring in Europe (Eionet 2019), these cell occurrences are newly recorded for Italy. The related phytosociological relevés of each contribution will be archived in the national database “VegItaly”, managed by the Italian Society of Vegetation Science (Gigante et al. 2012; Landucci et al. 2012). The parameter such as range (surface area) is one of the criteria used to assess habitat conservation status. In this perspective, implementing the

knowledge of habitat occurrence with new habitat records might be beneficial to evaluate their conservation status more accurately.

## Habitat records

Following the standard format of Gigante et al. (2019a), all species data, site data and descriptions of the new habitat records are hereafter provided. A synthetic overview of the newly recorded occurrences is provided in Table 1. The maps have been created by using the open source QGIS Geographic Information System (QGIS.org 2020).

**Table 1.** Synthetic overview of the newly reported data (CONT = Continental, MED = Mediterranean).

Hab ID	Hab name	Cell ID	Country	BR	N2000 Site	Authors

#37. Annex I Habitat: 3150 Natural eutrophic lakes with *Magnopotamion* or *Hydrocharition*-type vegetation (Bonini F, Ferri V)

**EUNIS Classification system:** C1.3 - Permanent eutrophic lakes, ponds and pools  
**Biogeographical Region:** Continental  
**National Habitat Checklist of reference:** “Manuale Italiano di interpretazione degli habitat della Direttiva 92/43/CEE” (Biondi et al. 2009).  
**Phytosociological reference:** *Potametum natantis* Hild 1959, *Nymphaeion albae* Oberd. 1957, *Potamogetonetalia* Koch 1926, *Potamogetonetea* Klika in Klika et Novák 1941 (Mucina et al. 2016).  
**Geographic information:** Italy, Umbria, Perugia, Gualdo Tadino, Valsorda, 1008 m a.s.l., Coordinates: 43.259999 N, 12.815047 E (Tab. 2, Rel. 1); 1007 m a.s.l., Coordinates: 43.260040 N, 12.815042 E (Tab. 2, Rel. 2); 1007 m a.s.l., Coordinates: 43.260049 N, 12.815021 E (Tab. 2, Rel. 3).  
**Cells ID in the EEA reference grid:** 10kmE455N224 (Fig. 1).

**Natura 2000 Site Code:** SAC IT5210014 “Monti Maggio - Nero (sommità)”.

**Phytosociological table:** Tab. 2; vascular taxa nomenclature according to “Portale della Flora d’Italia” (2021); algal taxa identification and nomenclature according to Bellinger and Sigee (2010).

**Notes:** The *Potamogeton natans*-dominated vegetation reported here refers to a little karst lake (Fig. 2) located in the SAC IT5210014 “Monti Maggio - Nero (sommità)”. Relevés show an evident and characteristic floristic poor-ness. Algal taxa at the genus level have been included in the survey too.

Nowadays the lake covers an area of about 310 m², surrounded by an outer belt with *Eleocharis palustris* vegetation about 5 m wide. Diachronic satellite images observed through the Google Earth software (2022) show a progressive reduction of the lake surface over the last 20 years.

The finding occurred during the activities of the Life Integrated project LIFE19 IPE/IT/000015 “LIFE IMAGINE Umbria - Integrated Management and Grant Investments for the N2000 Network in Umbria”.

**Figure 1.** Distribution in Italy of the Habitat 3150: in black the new cell, in grey the cells officially reported in the 4th Habitat report ex-Art. 17 (period 2013-2018; Eionet 2019).

**Table 2.** Habitat 3150.

^ Reference plant species of the Habitat 3150, from Biondi et al. (2009).

#38. Annex I Habitat: 3170\* Mediterranean Temporary Ponds (Rivieccio G, Bagella S, Caria MC)

**EUNIS Classification system:** C3.4 - Species-poor beds of low-growing water-fringing or amphibious vegetation

**Biogeographical Region:** Mediterranean

**National Habitat Checklist of reference:** “Manuale Italiano di interpretazione degli habitat della Direttiva 92/43/CEE” (Biondi et al. 2009).

**Phytosociological reference:** *Isoëtion* Br.-Bl. 1935, *Isoëtetalia* Br.-Bl. 1935, *Isoëto-Nanojuncetea* Br.-Bl. et Tx. in Br.-Bl. et al. 1952 (Mucina et al. 2016).

**Geographic information:** Italy, Sardinia, Oristano, Usellus, Altopiano S.Chicara, Paule Quaddu, 434 m a.s.l., Coordinates: 39.833047 N, 8.800797 E (Tab. 3, Rel. 1) and 435 m a.s.l., Coordinates: 39.833450 N, 8.801269 E (Tab. 3, Rel. 2).

**Cell ID in the EEA reference grid:** 10kmE421N186 (Fig. 3).

**Nature 2000 Site Code:** currently not included in any Natura 2000 Site.

**Figure 2.** Aspect of the Habitat 3150 in the reported stand (Valsorda, Gualdo Tadino, Perugia, Italy).

**Figure 3.** Distribution in Italy of the Habitat 3170\*: in black the new cells, in grey the cells officially reported in the 4th Habitat report ex-Art. 17 (period 2013–2018; Eionet 2019), in white (black outline) the cells later reported (Bazan et al. 2021; Gigante et al. 2019a).

**Phytosociological table:** Tab. 3; taxonomic nomenclature according to “Portale della Flora d’Italia” (2021).

**Notes:** Paule Quaddu is in a silvo-pastoral area, and its conservation depends on traditional land use (Bagella et al. 2016; Fois et al. 2021). The uncontrolled action of wild boars, particularly in the outer belt, could adversely affect typical habitat species mainly when associated with

ongoing climate change (Bagella and Caria 2013; Bolpag- ni et al. 2019; Caria et al. 2021). Because Paule Quadda has great floristic richness and is home to many species of conservation concern, it should be monitored despite being, like many sites in habitat 3170\*, outside the Natura 2000 network (Bagella et al. 2013).

(2022)], 10kmE459N166 [Tab. 1 (Rel. 24) in Brullo and Marcenò (1974)] (Fig. 3).

**Nature 2000 Site Code:** Relevés and tables mentioned in this paragraph refer to Brullo et al. (2022): SAC ITA030010 “Fiume Fiumedinisi, Monte Suderi” (Tab. A24, Rels 9 to 29); SAC ITA030005 “Bosco di Malabotta” (Tab. A30); SAC ITA020016 “Monte Quacella, Monte dei Cervi, Pizzo Carbonara, Monte Ferro, Pizzo Otiero” (Tab. A11, Rels 1 to 2); SPA ITA050012 “Torre Manfria, Biviere e Pianda di Gela” (Tab. A27, Rels 28 to 34); SAC ITA020020 “Querceti sempreverdi di Geraci Siculo e Castelbuono” (Tab. A11, Rels 3 to 7); SAC ITA020004 “Monte S. Salvatore, Monte Catarineci, Vallone Mandarini, ambienti umidi” (Tab. A11, Rel. 8); SAC ITA020028 “Serra del Leone e Monte Stagnataro” (Tab. A26, Rels 5 to 7); SAC ITA060003 “Lago di Pozzillo” (Tab. A26, Rel. 2).

**Phytosociological table:** Tabs A2, A6, A7, A9, A10, A11, A13, A14, A24, A26, A27, A30 in Brullo et al. (2022) and Tab. 1 in Brullo and Marcenò (1974); taxonomic nomenclature according to Bartolucci et al. (2018).

**Notes:** This habitat, characterized by plant communities belonging to class, occurs from the coastal belt to the high mountains of the northern ranges (up to 1600 m a.s.l.) in Sicily. These findings are in accordance with the syntaxonomical revision carried out by Brullo et al. (2022).

**#40. Annex I Habitat: 3260 Water courses of plain to montane levels with the *Ranunculion fluitantis* and *Callitricho-Batrachion* vegetation (Fiaschi T, Fanfarillo E, Angiolini C)**

**EUNIS Classification system:** C2.3 Permanent non-tidal, smooth-flowing watercourses.

**Biogeographical Region:** Mediterranean

**National Habitat Checklist of reference:** “Manuale Italiano di interpretazione degli habitat della Direttiva 92/43/CEE” (Biondi et al. 2009).

**Phytosociological reference:** *Batrachion fluitantis* Neuhäusl 1959, *Potametalia pectinati* Koch 1926, *Potamogetonetea* Klika in Klika et Novák 1941 (Lastrucci et al. 2010; Mereu et al. 2010; Mucina et al. 2016).

**Geographic information:** Italy, Tuscany, Siena, Colle di Val d'Elsa, 120 m a.s.l., Coordinates: 43.420509 N, 11.132562 E (Tab. 4, Rel. 1); 119 m a.s.l., Coordinates: 43.420773 N, 11.132174 E (Tab. 4, Rel. 2); 118 m a.s.l., Coordinates: 43.422548 N, 11.130689 E (Tab. 4, Rel. 3); 118 m a.s.l., Coordinates: 43.423415 N, 11.129922 E (Tab. 4, Rel. 4).

**Cell ID in the EEA reference grid:** 10kmE441N225 (Fig. 4).

**Nature 2000 Site Code:** currently not included in any Natura 2000 Site.

**Phytosociological table:** Tab. 4; taxonomic nomenclature according to Bartolucci et al. (2018).

**Notes:** The habitat has been identified in the early-middle stretch of the Elsa River, running through the town of Colle di Val d'Elsa. It is located within the ANPIL (natural areas of local interest) “Parco Fluviale dell'Alta Val d'Elsa” and not far from the SAC IT5190003 “Montagnola

**Figure 4.** Distribution in Italy of the Habitat 3260: in black the new cell, in grey the cells officially reported in the 4th Habitat report ex-Art. 17 (period 2013–2018; Eionet 2019), in white (black outline) the cells later reported (Rivieccio et al. 2020, 2021).

^ Reference plant species of the Habitat 3260, from Biondi et al. (2009).

Senese". The presence of this habitat was already known for some nearby cells and in other parts of the Elsa River itself. These data allow to increase the knowledge on distribution of Habitat 3260 in central Tuscany, which was recently detected in nearby areas (Rivieccio et al. 2021). It must be noted that the Habitat 3260 shares a lot of species with the Habitat 3150 ("Natural eutrophic lakes with *Magnopotamion* or *Hydrocharition*-type vegetation" – Biondi et al. 2009), and that in many cases the attribution to one habitat or the other has to be based on the physical conditions of the sites (running vs still waters).

**#41. Annex I Habitat: 4090 Endemic oro-Mediterranean heaths with gorse** (Gianguzzi L, Ilardi V, Bazan G)

**EUNIS Classification system:** S74 (formerly: F7.4) Central Mediterranean Mountain hedgehog-heath (Chytrý et al. 2020).

**Biogeographical Region:** Mediterranean

**National Habitat Checklist of reference:** Manuale Italiano di interpretazione degli habitat della Direttiva 92/43/CEE (Biondi et al. 2009).

**Phytosociological reference:** *Genistetum tyrrhenae* (Brullo, Di Martino & Marcenò 1977) Brullo in Brullo & Furnari 1994 [Tab. S2 in Gianguzzi et al. (2015)]; *Calicotomo villosae-Genistenion tyrrhenae* Gianguzzi, Cusimano, Ilardi & Romano 2015; *Calicotomo villosae-Genistion tyrrhenae* Biondi 1997; *Cisto salvifolii-Genistetum madoniensis* Marino, Guarino & Bazan 2012 [Tab. **Notes:** The garrigues with *Genista* sp. pl. of the *Cisto-Lavanduletea* and *Rosmarinetea officinalis* classes of the southern territories of the Italian-Tyrrhenian Province, have been reviewed in a recent phytosociological contribution (Gianguzzi et al. 2015). The study led to the syntaxonomic characterization of several coenoses and to the redefinition of some new other sintaxa. In Sicily these garrigues are dominated by the following endemic and subendemic taxa: *Genista tyrrhena* subsp. *tyrrhena* (Aeolian Archipelago), *G. gasparrini* (Mount Gallo at Palermo), *G. madoniensis* (Madonie Mts.), *G. aristata* (Madonie and Nebrodi Mts.), *G. cupanii* (Madonie Mts.), *G. demarcoi* (Pizzo di Pilo at Isnello), *G. aristata* (Madonie Mts, Nebrodi Mts. and southern Calabria) and *G. aspalathoides* (Pantelleria Island and coasts of Tunisia and Algeria). In particular, the *Genista* sp. pl. garrigues of Sicily have been attributed to seven associations and two subassociations, referring to three distinct suballiances of the aforementioned vegetation classes *Cisto-Lavanduletea* (acidophilous communities on volcanic substrata and quartzarenites) and *Rosmarinetea officinalis* (basiphilous communities on calcareous and calcareous-dolomite substrates).

The *Genista* sp. pl. communities have a secondary origin due to grazing activities and fire and despite the long-term exploitation they maintain a high biodiversity level and represent elements of a sustainable use of traditional and historical agricultural landscapes (Marino et al. 2012; Bazan et al. 2020a, 2020b; Castrorao Barba et al. 2021). The high conservation interest of these communities with regards to the peculiarity of their floristic composition, with the presence of rare or endemic species, made them worthy of inclusion in the habitat 4090. This led to a subsequent update of the distribution of the habitat 4090 in Sicily, in the same way as other formations reported for the western part of Sicily and the small islands (e.g., De Castro et al. 2008, 2015; Gianguzzi and Bazan 2020; Gianguzzi and La Mantia 2009; Gianguzzi et al. 2013, 2014a, 2014b, 2015, 2016, 2017, etc.).

#### #42. Annex I Habitat: 91LO Illyrian oak-hornbeam forests (*Erythronio-Carpinion*) (Fanfarillo E, Fiaschi T, Angiolini C)

**EUNIS Classification system:** included in T1E - *Carpinus* and *Quercus* mesic deciduous forest (Chytrý et al. 2020).

**Biogeographical Region:** Mediterranean

National Habitat Checklist of reference: “Manuale Italiano di interpretazione degli habitat della Direttiva 92/43/CEE” (Biondi et al. 2009).

**Phytosociological reference:** *Carpino betuli-Coryletum avellanae* Ballelli, Biondi & Pedrotti 1982, *Pulmonario apenninae-Carpinenion betuli* Biondi, Casavecchia, Pinzi, Allegrezza & Baldoni ex Biondi, Casavecchia, Pinzi, Allegrezza & Baldoni in Biondi, Allegrezza, Casavecchia, Galdenzi, Gigante & Pesaresi 2013, *Erythronio-Carpinion* (Horvat 1958) Marinček in Wallnöfer et al. 1993, *Fagetalia sylvaticae* Pawłowski 1928, *Carpino-Fagetalia sylvaticae* Jakucs ex Passarge 1968 (Ballelli et al. 1980; Biondi et al. 2014; Mucina et al. 2016).

**Geographic information:** Italy, Lazio, Frosinone, Fumone, 563 m a.s.l., Coordinates: 41.744147 N, 13.252099 E (Tab. 5, Rel. 1); 562 m a.s.l., Coordinates: 41.744062 N, 13.251308 E (Tab. 5, Rel. 2); Italy, Lazio, Frosinone, Alatri, 450 m a.s.l., Coordinates: 41.7342281 N, 13.299273 E (Tab. 5, Rel. 3); 493 m a.s.l., Coordinates: 41.758622 N, 13.342764 E (Tab. 5, Rel. 4); Italy, Lazio, Frosinone, Fumone, 586 m a.s.l., Coordinates: 41.743762 N, 13.253897 E (Tab. 5, Rel. 5); Italy, Lazio, Frosinone, Alatri, 446 m a.s.l., Coordinates: 41.735465 N, 13.302729 E (Tab. 5, Rel. 6).

**Cell ID in the EEA reference grid:** 10kmE459N207 (Fig. 10). **Nature 2000 Site Code:** currently not included in any Natura 2000 Site.

**Phytosociological table:** Tab. 5; taxonomic nomenclature according to Bartolucci et al. (2018).

**Notes:** In the area of the records, these woods are often fragments located in High Nature Value agricultural areas that are very rich in patches of other well-preserved natural vegetation types, like *Carpinion orientalis* Horvat 1958 forests (Fanfarillo et al. 2017a, 2017b). Relevés 1, 2, and 5 are included in the Canterno Lake Natural Reserve.

#### #43. Annex I Habitat: 91MO Pannonian-Balkan turkey oak-sessile oak forests (Fanfarillo E, Fiaschi T, Angiolini C)

**EUNIS Classification system:** T19512 - Southern Italic *Quercus frainetto* forests (Chytrý et al. 2020).

**Biogeographical Region:** Mediterranean

**National Habitat Checklist of reference:** “Manuale Italiano di interpretazione degli habitat della Direttiva 92/43/CEE” (Biondi et al. 2009).

**Phytosociological reference:** *Mespilo germanicae-Quercetum frainetto* Biondi, Gigante, Pignattelli & Venanzoni 2001, *Ptilostemo stricti-Quercenion cerridis* Bonin & Gamisans 1977, *Crataego laevigatae-Quercenion cerridis* Arrigoni 1997, *Quercetalia pubescenti-petraeae* Klika 1933, *Quercetalia pubescentis* Doing-Kraft ex Scamoni et Passarge 1959 (Biondi et al. 2001; Biondi et al. 2014; Mucina et al. 2016).

**Geographic information:** Italy, Lazio, Frosinone, Alatri, 216 m a.s.l., Coordinates: 41.660184 N, 13.322857 E (Tab. 6, Rel. 1).

**Figure 10.** Distribution in Italy of the Habitat 91L0: in black the new cell, in grey the cells officially reported in the 4th Habitat report ex-Art. 17 (period 2013-2018; Eionet 2019).

^ Reference plant species of the Habitat 9340, from Biondi et al. (2009).					

**Notes:** The relevés describe the holm-oak forests that occur in the volcanic area of the Somma-Vesuvio complex. Like most other natural habitats which are located in the area around the Bay of Naples, todote this forest habitat is mainly threatened by the effects of various human activities, such as wildfires (Stinca et al. 2020) and invasions of alien species (Stinca et al. 2015), but also by extreme natural events linked to climate change (Teobaldelli et al. 2020).
